

## A preliminary report on a part of the pyrites deposits of Georgia

---

By Harold Kurtz Shearer

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 64 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: . . . lies to the northeast of the shaft. On the 300-and 400-foot levels the ore has been worked to a distance of 700 feet northeast of the shaft, without reaching the end of the shoot. The thickness ranges from 4 to 25 feet, with a probable average of 10 feet. Most of the ore above the 400-foot level has been stoped out, but on the 500-foot level only a little drifting has been done. Not much exploration work has been done, but there are several shafts which have cut probably workable deposits at other points along the lead. About a quarter of a mile northeast of the mine are three shafts, now caved in. It is said that 2y2 feet of good ore was encountered in one of these, and 6 feet in another. There is a twocompartment, timbered vertical shaft near the point where the lead...
