

# Computer Simulation of Complex plasmas

By Aamir Shahzad

SPS Feb 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x13 mm. This item is printed on demand - Print on Demand Neuware - This book is focused on the thermophysical properties of complex liquids (dusty plasmas) using novel molecular dynamics simulation (MDS) methods, and will disclose the exact nature and origin of the deep understanding exist in different modes of complex liquids. New MDS methods for investigating transport properties in microelectronic (thermoelectronic and photoelectronic) devices are required for improving device design and for understanding device physics. Such methods are also required for studying new transport phenomena in nanoscale devices made of novel nanostructures, such as carbon electronics or semiconductor nanowires, nanometer size sensors to detect proteins or single DNA and nanolevel fluidic flow, nanopowder production, nanocrystalline solar cells and polymer coatings with embedded nano particles. Plasma thermal conductivity, heat process and their nonlinear effects (non-Newtonian behaviors) are the basic data of transport property of complex liquids, and are applied for studying their flow, and heat and mass transfer characteristics. We have discussed the thermal conductivity of complex (dusty) plasmas that is an important parameter using in the heat designing system. 220 pp. Englisch.

## Reviews

*Good eBook and useful one. It is amongst the most remarkable ebook i actually have study. You can expect to like the way the article writer publish this pdf.*

-- **Prof. Armand Senger DVM**

*Absolutely essential go through book. It can be rally fascinating through studying period of time. You wont truly feel monotony at any time of your respective time (that's what catalogues are for concerning in the event you question me).*

-- **Roberto Leannon**

## Other Kindle Books
