Excerpt: .jargon employed really encumbers the path of science and progress, and, finally, becomes a much greater nuisance than the smoke which these mock-philosophers pretend to subdue. So far from perfect combustion, and perfect smokelessness, in a steam-engine furnace being identical, they are, very commonly, the antithesis of each other; perfect combustion being the most completely effected when the whole of the oxygen passing through the grate is the most nearly or perfectly used up in combining with the hydrogen and carbon of the fuel, although it may be occasionally accompanied by the inappreciably small loss of a few uncombined atoms of the latter substance in the form of smoke or soot, which in fact it is, in a finely-divided and impalpable state, merely giving a black color to the nitrogen and other useless incombustible gaseous products of the furnace. These products must pass off, visible or invisible, at whatever cost, although we question, were it possible to collect all the fuel in a large volume of visible smoke many hundreds of miles in extent, whether it would amount to a single ton of coals. A smokeless furnace, however, on the other hand, when the result of a thick fire, thick bars, and slow combustion, may, and frequently does, occasion a loss of a large part of the carbon of the coal, which passes off by the chimney, only half-burned, in the shape of perfectly invisible carbonic oxide-gas, thus creating a dead loss of 25 per...
